

EMC'S NEW YEAR'S RESOLUTION

Editing Machines has made a New Year's Resolution... to offer the highest picture quality available and a greatly enlarged picture size, without sacrificing the flexibility of the EMC2, a digital nonlinear editing system! With the C-Cube implementation, the EMC2 has completed the two-part upgrade... now offering close to VHS quality video!

Both Film and Videotape editors have been searching for an answer to the tedium of offline editing, and Editing Machines is now offering you a solution which will appeal to your senses... both creative and common.

Our new resolution, coupled with the removable media and low cost, make the EMC2 the most desirable system on the market today. Quite simply, if you haven't seen the EMC2 lately... you HAVEN'T seen the EMC2!

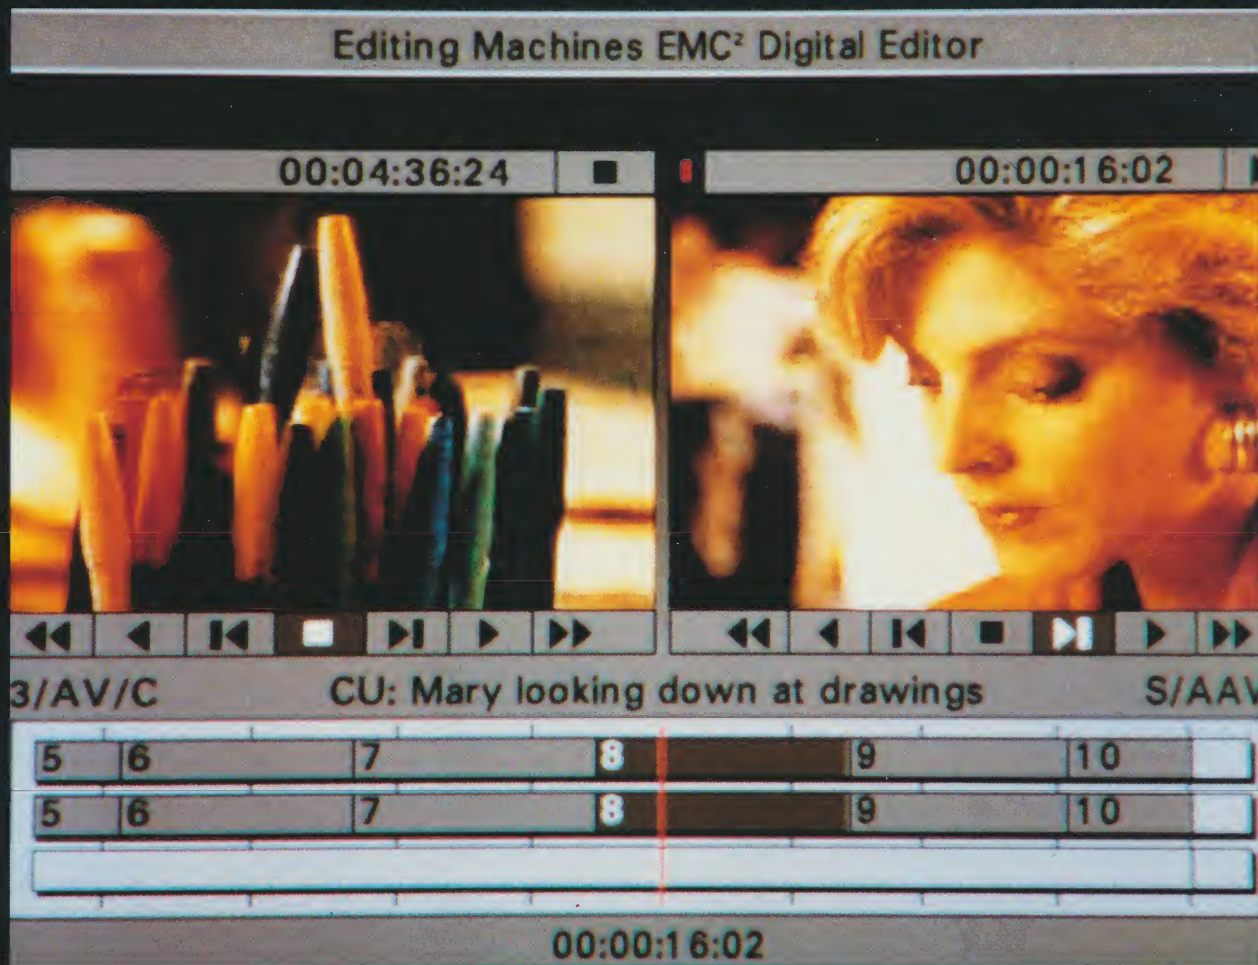

For more details on EMC2 demonstration locations, or for additional information, please feel free to contact Nancy Umberger, Director of Marketing at (202) 232-4597.
